Script-Rumpf

Tragen Sie hier Ihr Script ein.

```
# Available parameters:
# fields = HTTP request form fields as key value pairs
# request = The current HTTP request.
#           Access fields by request.form["myfieldname"]
# ploneformgen = PloneFormGen object
#
# Return value is not processed -- unless you
# return a dictionary with contents. That's regarded
# as an error and will stop processing of actions
# and return the user to the form. Error dictionaries
```
